

The Philadelphia Lab will be upgrading the Zeiss Anti-Reflective Coating Lab, to also include the ability to do Essilor Anti-Reflective coatings, including bifocals and trifocals. The upgrade will require Davis Vision to close the Philadelphia Anti-Reflective Lab for about 4 weeks, while construction occurs. To accommodate for the closure, the Laboratory has taken steps to make sure that optical orders are routed accordingly. Zeiss Anti-Reflective coating optical orders will be outsourced.

There should be minimal impact and these optical orders should only be delayed for one day or two days, at the most.
