

Progressive Addition (PAL) and Intermediate Lens Formulary

In order to best support each practitioner's professional judgment in providing the ideal PAL design for an individual patient's needs, Davis Vision has implemented a 2-tier progressive lens formulary for most groups. Under this formulary, members may receive either Standard or Premium progressive lens designs. The patient charge for either category may differ and is indicated on the group specified Service Record Form or Personalized Service Record Form. A listing of all progressive lens designs in each category is represented in the following table:

STANDARD PROGRESSIVE STYLES

Short Corridor:

AO Compact
AO Compact Ultra
